

# Granol'plus Chrono

Setting accelerator for organic façade renders.

## Field of Application

Granol'plus chrono is used as a setting accelerator for Granol, Granosil or Regacryl.  
Granol'plus Chrono can be used during cold and humid seasons.

## Composition

Additive for façade renders such as Granol, Granosil or Regacryl façade paint, to improve protection against unforeseen rainfall.

## Colours

Yellow/brown.

## Characteristics

This additive makes plasticized renders more resistant to water and humidity in the first setting stages. It can also be used at temperatures above 20°C.

Granol'plus Chrono is effective from + 5 ° C to + 15 ° C and in humid conditions . The relative humidity must not exceed 85%.  
Granol'plus Chrono doesn't have a yellowing effect, but can however create small colour differences.

## Consumption

0,5 L per 25 kg of plasticised render or 15 L of paint.

## Technical data

---

Water Based

---

Density +/- 1,05 g/cm<sup>3</sup>

---

## Packaging

Bottles of 0,5 L.

## Remarks

Restriction of working under the advised temperature. Granol'plus chrono can create a slight colour change in the plasticized render. It is possible that Granol'plus Chrono increases viscosity of the organic render, if necessary add some clean water. (max. 2%)
