

Betoprim

Betoprim is a ready to use primer.

Field of Application

Betoprim is used as a primer to ensure the bonding of plasters and renders on smooth substrates or substrates with a low porosity. The addition of quartz sands ensures an extra mechanical bond to the substrate.

Composition

Betoprim is a polymer based watery substance with added quartz sand.

Preparation substrate

The substrate must be dry and free of dust, grease, mold release agents, loose mortar, laitance, and efflorescence. Betoprim can only be applied at temperatures of +5°C to +30°C.

Preparation mixture

Betoprim is ready to use.

Application

Betoprim is applied with a brush a roller or by spraying. It is advised to stir the mixture before application and from time to time to ensure its homogeneity.

Plaster/render can be applied after the primer has dried. Tools can be rinsed with water.

Consumption

200 to 300 g/m²

Technical data

colour	pink
density	± 1,5
Dry extract:	± 63%
pH	9
Non corrosive	

Packaging

Betoprim is available in buckets of 20 kg.

Keeps for one year in original packaging and protected from frost.

Remarks

Keep out of reach of children.

Classification

EU VOC limit value for this product (cat A / c WB): 30 g / L

This product contains a maximum of 30 g / L VOC
